THE SAFE RISK MANAGEMENT MODEL

See it
Walk around the workplace with the staff and look for hazards. Use a checklist if you want and make a list of all the hazards you can see.

Assess it
Once the list has been made, consider the likelihood and consequence of an accident.

Fix it
Develop and put in place controls that minimise the risk of something happening or of somebody being hurt. Fix it before it causes damage.

Evaluate it
Review how effective the control you put in place was and consider whether or not you need to take further action.
